Title: Validate there are no repeated values for unique items.

Description:

For unique items, in this case shoe model per brand, check there are no repeated values.

Check on all pages and fields (like dropdown list if present).

Preconditions:

Navigate to home <https://rb-shoe-store.herokuapp.com>

Environment. Safari, Chrome, Firefox

Steps to reproduce:

Action	Data	Expected Result
1. Open Dropdown box "Choose a brand"	None	None
2. Take note on one brand	Acorn	None
3. Scroll down inside the dropdown list	None	Check value is not being repeated.
4. Repeat steps 1-3 with the rest of brands and shoe model in all the fields and in all the pages inside shoe store.	None	None

Title: Validate SSL is enforced through all the shoe store page.

Description:

Due to the e-commerce nature of the shoe store, if a user is trying to open http version of the page, it must be redirected automatically to https.

Preconditions:

Navigate to home <https://rb-shoe-store.herokuapp.com>

Environment. Safari, Chrome, Firefox

Steps to reproduce:

Action	Data	Expected Result
1. On the web browser address bar, delete "s" on "https"	None	None
2. Press Enter	Enter	At any point, if user try to navigate to http, it should be automatically redirected to https

Title: On input fields with specific format parameter, validate it is checking the correct format parameter.

Description:

Validate that all input fields with format parameter on shoe store page, are validating the correct format parameter.

Preconditions:

Navigate to home <https://rb-shoe-store.herokuapp.com>

Now, there are 3 input fields to validate: “Remind me of new shoes” and “Promotional Code” are in main menu, and “Notify me when this shoe is available” is located inside month, brand and “All Shoes” page.

Environment. Safari, Chrome, Firefox

NOTE: It is unclear what’s the correct format parameter for “Promotional Code” input field

Steps to reproduce:

Action	Data	Expected Result
1. On “Remind me of new shoes” field type an email ending on .tv	ricardo.franco@outlook.tv	None
2. Click on “Submit” button	None	Format parameter for this email example is correct and .tv is a valid extension domain, so, it should display: “Thanks! We will notify you of our new shoes at this email: <a href="mailto:ricardo.franco@outlook.tv">ricardo.franco@outlook.tv</a> ”
3. Try again with invalid format parameter	fsff	It should display “Invalid email format. Ex. <a href="mailto:name@example.com">name@example.com</a> ”
4. Try again, but now with no data (empty input).	None	“Please enter an email address” “Please enter a promotional code”
5. Try again with the rest of input fields with format parameter through the whole shoe store page.	None	“Invalid code format” error message displayed for incorrect promotional code data.

Title: Validate a generic and friendly error is displayed when trying to access to nonexistent page in shoe store, or when error is generated by any other circumstance (404, 500, etc)

Description:

It is important to catch all the error log on the web, because it can disclose sensitive information to end user. End user should be only able to see generic and user friendly errors. It is also important to display a message when a page is intentionally with no data (example December)

Preconditions:

Navigate to home <https://rb-shoe-store.herokuapp.com>  
Environment. Safari, Chrome, Firefox

Steps to reproduce:

Action	Data	Expected Result
1. Navigate to any month. Example February.	February	None
2. On the web browser address bar, delete February	None	None
3. Type thismonthdoesntexist	thismonthdoesntexist	None
4. Press "Enter"	None	Page should display a friendly message explaining that the month page typed doesn't exist or is invalid.
5. Continue navigating through shoe store page, and keep trying to generate errors	None	Check that all the errors generated are generic, friendly and with no sensitive information.

Title: Validate grammar. Also, validate that everything is being rendered as documentation states.

Description:

It is important to maintain an impeccable grammar and avoid any visual issue like text overlapping, cropped text, missing elements like images or input fields.

Preconditions:

Navigate to home <https://rb-shoe-store.herokuapp.com>

Environment. Safari, Chrome, Firefox

Steps to reproduce:

Action	Data	Expected Result
1. Navigate through all the shoe store page (months, "All Shoes", brands)	None	None
2. Check text data, page structure, formatting, images, style character, colors used	None	Validate everything is being rendered as documentation states. Check there are no visual defects on shoe store page. Check there are no missing elements. Check all the links and buttons are working (HOME, Back, etc)

Title: Validate that brands displayed on the dropdown list “Choose a brand” are ordered alphabetically.

Description:

It is important to keep an easy path for user navigation. For dropdown list with huge number of elements like “Choose a brand”, having the elements ordered alphabetically it might work for an easy user navigation.

Preconditions:

Navigate to home <https://rb-shoe-store.herokuapp.com>

Environment. Safari, Chrome, Firefox

Steps to reproduce:

Action	Data	Expected Result
1. Click on “Choose a brand” dropdown list field	None	None
2. Validate each element	None	Check each element is ordered alphabetically
3. Scroll down	Validate all the elements	Continue checking that each element is being ordered alphabetically
