Title: Brands are repeated on same Dropdown list ("Choose a brand" dropdown box)

Description:
    Preconditions:
        Navigate to home https://rb-shoe-store.herokuapp.com

    Steps to reproduce:
1. Open Dropdown box "Choose a brand"
2. Take note on one brand, example Acorn.
3. Scroll down inside the Dropdown
4. Review the rest of Dropdown box

    Expected Behavior:
        Each brand should appear once inside Dropdown box "Choose a brand"
   Observed Behavior:
        Each brand will appear at least twice inside Dropdown box "Choose a brand".
        This might be annoying for the user causing confusion.
    Environment. Safari, Chrome, Firefox
    Reproducibility:
        100% reproducible

Title: While navigating per month, per brand or by selecting "All Shoes", the same shoe model will be repeated at least twice.

Description:
    Preconditions:
        Navigate to home https://rb-shoe-store.herokuapp.com

    Steps to reproduce:
        1. Navigate to any month (for example January)
        2. Look the shoe list displayed.
        3. Same behavior will appear on all the months and brands with shoe data.

    Expected Behavior:
        Each shoe model should appear once.
    Observed Behavior:
        Each shoe model will appear at least twice.
    Environment. Safari, Chrome, Firefox
    Reproducibility:
        100% reproducible

Title: Lack of SSL enforcement

Description:
      Preconditions:
            Navigate to home https://rb-shoe-store.herokuapp.com

      Steps to reproduce:
            1.   At any point, user can switch navigation to http. Example:
            http://rb-shoe-store.herokuapp.com
            http://rb-shoe-store.herokuapp.com/shoes
            http://rb-shoe-store.herokuapp.com/brands/Valentino
            http://rb-shoe-store.herokuapp.com/months/january

      Expected Behavior:
            Due to the e-commerce nature of the shoe store, if a user is trying to open http
            version of the page, it must be redirected automatically to https.
      Observed Behavior:
   User can easily change https to http.
      Environment. Safari, Chrome, Firefox
      Reproducibility:
            100% reproducible

Title: On "Remind me of new shoes" field, it is unable to register email with some specific domain extension ending, like .tv (example: admin@twitch.tv)

Description:
    Preconditions:
        Navigate to home, or to any month or to any brand

    Steps to reproduce:
        1. On "Remind me of new shoes" field type an email ending on .tv
        2. Click on "Submit"

    Expected Behavior:
        Since .tv is a valid ending domain extension, user should be able to register the email.
    Observed Behavior:
        An error will appear "Invalid email format. Ex, name@example.com"
    Environment. Safari, Chrome, Firefox
    Reproducibility:

Priority: Minor
Severity: Minor
Labels: error, web, invalid_page

Title: Customize web page errors for something more friendly and generic

Description:
    Preconditions:
        Navigate to home https://rb-shoe-store.herokuapp.com
        Identify a way to get page error. Like trying to navigate to inexistent page.
        Examples:
        https://rb-shoe-store.herokuapp.com/fs (404 error)
        https://rb-shoe-store.herokuapp.com/brands/Ji (500 error)

    Steps to reproduce:
        1. On the web browser address bar, type a nonexistent page from shoe store.
        2. After .com type /nonexistent
        3. The full URL should look like this
           https://rb-shoe-store.herokuapp.com/nonexistent
        4. Press Enter

    Expected Behavior:
        It should display a generic error with more friendly design, or at least, with the
        same general page design.
    Observed Behavior:
        Is displaying short error with no page design, which is fine, but it could be better a
        more generic error with the same page design from main page.
    Environment. Safari, Chrome, Firefox
    Reproducibility:
        100% reproducible

Scrum Team: Shoe Sales Web Portal
Sprint: web_sales_Quarter1_Sprint2
Assignee: Unassigned
Reporter: Ricardo Franco
Tester Ricardo Franco
Priority: Trivial
Severity: Trivial
Labels: css, design, web

Title: If possible, minify css file

Description:
    Preconditions:
        Navigate to home https://rb-shoe-store.herokuapp.com

    Steps to reproduce:
        1. On the web browser address bar, navigate to css file.
        2. After .com type /stylesheet.css
        3. The full URL should look like this
           https://rb-shoe-store.herokuapp.com/stylesheet.css
        4. Press Enter

    Expected Behavior:
        Is a good practice to minify css and javascript files. Minifying strips out all
        comments, superfluous white space and shortens variable names. It thus reduces
        download time for your JavaScript files as they are (usually) a lot smaller in
        filesize.
    Observed Behavior:
        stylesheet.css has not been minified. It might not be required, since now css file is
        very small. But, minifying is a good practice to improve performance on large css
        and javascript files.
    Environment. Safari, Chrome, Firefox
    Reproducibility:
        100% reproducible
